SQL Code on Data Bricks

```sql
USE CATALOG `workspace`;
USE SCHEMA `default`;

SELECT *
FROM retail.sales.retail_sales_dataset;

SELECT COUNT(DISTINCT `Customer ID`) AS unique_customers, -- I am counting different customers in my table

Date,

YEAR(Date) AS trans_year, -- Extract the year from the date column

MONTH(Date) AS trans_month, -- Extract the month from the date coulumn
MONTHNAME(Date) AS trans_month_name, -- Extract the month name from the date column

DAY(Date) AS trans_day, -- Extract the day from the date column
DAYNAME(Date) AS trans_day_name, -- Extract the day name from the date column

SUM(`Total Amount`) AS revenue, -- Calculate total revenue

`Product Category`

FROM retail.sales.retail_sales_dataset

GROUP BY ALL; -- Grouping my data based on all the columns that are not aggregated in my Select Statement
```
